Spectragryph optical spectroscopy software

comparative advertising, taken from user statements :)

„I have been advertising (with my colleagues) that I think this is a better solution than **Omnic** especially for our needs "

„I've been using your software for the past month or so and am really impressed. It is significantly better than Thermo's **GRAMS** which I was using before."

„I am looking for new software to analyze our spectra because the **Thorlabs** software is horrible and it never works. "

„I find your software excellent for spectra export. Previously I used **R** software, but your way is more elegant."

„I must admire that your software can do baseline correction way more better than **OMNIC**. "

„I am a PhD student working mainly with FTIR, Raman and XRF and liked very much using your software as it is amazingly helpful and better than many many **other open-source software**"

„I wanted to thank you for your awesome software, there is no competition between your software and the software of other people, even **Jasco suite spectra manager** with spectra analysis isn't as intuitive and powerful as your software. "

„Spectragryph made data treatment something almost enjoyable, compared to **Origin**. I cannot imagine to return to it. "

„Your software is just miles better that **OceanView**. So much easier and it does what I want not what it wants."

„Thank you very much for developing this really nice software. I gave it a go as **Oceanview** is lets say less than impeccable when it comes to spectra processing. "

„A good analysis tool such as Spectragryph is indispensable for me, especially since the spectrometers of choice in the university lab are all of the **Shimadzu** brand - affordable and robust equipment, but with very unfriendly and unattractive user interface and export style for data. Spectragryph provides a much better alternative to the original software. "

„I would like to thank you for developing Spectragryph which really makes an excellent alternative for many softwares like **Spectrum**, **UV probe**, **Opus**, **Labspec** , **GRAMS** and many other softwares. "

„At the moment, I am carrying out a project on Raman spectroscopy of aged polymers. However, the included software for the spectrometer (provided by **Anton Paar**) is rather unsatisfactory (e.g. can't integrate et cetera). So I found out about your software and am very pleased with it. "

„when I used it first time after using many days of **opus** software I became fan of this software. its really better than the **opus** software in terms of handling and user interface. it have some extra features also that not in the **opus** "
